

RGB Amp as mimicked by Robert P. Credit goes to the Jap manual this came out of.

10/50, 10/50, 10/50	10uF 50V	75 ohm, 75 ohm, 75 ohm	75Ω 50W
100/10, 100/10, 100/10, 100/10	100uF 10V	Ceramic Capacitor	0.01uF 10V
47/10, 47/10, 47/10	47uF 10V	NJM2267D, NJM2267D	qty 2

Above is the parts list, I tried to make this as simple as possible so than anyone could look at it and understand what they are seeing. The layout of the schematic is looking at the board from the bottom side (side you will be soldering) so essentially if you mirror this image you will be looking at the top of the board.
